METHOD DEVELOPMENT & VALIDATION

OVERVIEW

Many pharmaceutical companies and manufacturers are at the forefront of developing new drugs and compounds. Their scientists need to partner with a reliable and accurate laboratory they can depend on to assist in developing methods. Method development helps prove that a scientific process is suitable for its intended use in drug production. For routine Industrial Hygiene, method development helps validate chemicals and may be used to understand the exposure limits of a new or proprietary chemical. In some cases, a customized protocol or validation process must be formulated following industry-accepted methods.

HOW CAN BUREAU VERITAS HELP YOU?

Bureau Veritas provides method development and validation services for drug materials and compounds that lack sampling and analysis protocols. This service is available for active pharmaceutical ingredients, proprietary chemicals, intermediates and final products that may be in your pipeline. We employ a full range of instrumentation, including the most advanced and sensitive analytical technologies available.

Bureau Veritas follows industry-accepted method development and validation protocols, which can also be customized to meet your requirements. We have adapted IH methods that can be performed on wipes, swabs or rinses to address surface sampling for housekeeping. Our methods are developed in accordance with guidelines from OSHA, NIOSH and the US EPA. While many of these methods are proprietary, some have been published in peer-reviewed journals.

Bureau Veritas can also provide validation services on existing methods including method transfer, verification and storage stability. We have the capability to verify the method performance of existing sampling and analytical methods prior to transferring a method.

ABOUT US

Bureau Veritas has been a leading provider of Industrial Hygiene analytical services in North America for more than 60 years. Our laboratories have been accredited by the American Industrial Hygiene Association Laboratory Accreditation Program (AIHA-LAP, LLC) since 1974.

We offer a broad range of test methods published by OSHA, NIOSH, the Environmental Protection Agency (EPA), ISO and scientific journals.

Clients have to come to rely on Bureau Veritas for our expertise in sampling and analytical methods, reliability, and exceptional customer service. Our service teams have years of combined industry experience, and we're always available to answer your sampling questions.
