SUSTAINABILITY
SOLUTIONS

BUREAU
VERITAS

MEASURE AND REDUCE YOUR IMPACT ACROSS THE APPAREL AND TEXTILE VALUE CHAIN

APPAREL AND TEXTILE SUSTAINABILITY SOLUTIONS

The apparel and textile industry is under growing pressure to reduce environmental footprint, improve supply chain sustainability, and accelerate circularity. With impacts spread across life cycle stages and numerous supplier facilities, companies are challenged to:

- **Process high volumes of representative supplier data** efficiently and reliably
- **Identify where to act** across a complex value chain
- **Demonstrate consistent progress** on sustainability targets
- **Manage changes in calculation methodologies** (e.g. GHGP Land Sector and Removals Standard)
- **Comply with product transparency requirements**, including Digital Product Passports (DPPs)

AITrack by Bureau Veritas offers integrated data, software, and consulting solutions to address these challenges. By combining scalable life cycle assessments (LCA) with corporate reporting and strategy, we help apparel, footwear, and textile companies measure and reduce environmental impacts across their entire value chain.

KEY BENEFITS

Turn Supplier Data into Robust Inventories

Integrate facility-level FEM/FDM data with trusted LCA results to build reliable corporate GHG and water inventories.

Accelerate Progress Toward Sustainability Goals

Pinpoint precise hotspots at the facility, material, and activity levels to drive actionable mitigation strategies and verifiable progress.

Enable Product Transparency for Circularity & Compliance

Assess product-specific impacts across thousands of SKUs to inform material choices and circular initiatives, while supporting product-level reporting and compliance readiness.

Adapt to Evolving Standards and Regulations

Complete re-baselining in hours, not weeks, to recalculate historical results or align with changing reporting guidelines and methodologies—enabling rapid decisions backed by consistent, up-to-date inventories.

OUR SOLUTIONS

Corporate Footprinting

We deliver comprehensive inventories for Scope 1-3 GHG emissions, water stress, and other environmental issues, with unmatched speed and depth for Scope 3 assessment. Our inventory analysis supports:

- Audit-ready reporting aligned with global frameworks, incl. CSRD, CDP, GRI, and SB 253
- SBTi target setting and tracking, incl. FLAG targets
- Climate risk assessment for ISSB/TCFD, CSRD, and SB 261 disclosures

Product Footprinting at Scale

We help companies assess cradle-to-grave environmental impacts for thousands of products within months. Our solution enables:

- Bespoke LCA and PCF at scale in flexible formats (e.g., PACT)
- Granular scenario analysis at the product level or across product portfolios, e.g. fiber substitution analysis across thousands of product lines
- ISO-conformant results and DPP/PEF readiness to ensure market access

Mitigation Strategy

Built from your corporate environmental inventory, our dynamic solution provides actionable mitigation strategies to meet your sustainability targets, covering:

- Real-time interactive roadmap modeling to reflect changing growth plans
- Cost-effective pathways prioritized by abatement potential and financial metrics
- Validated intervention calculations for external reporting (e.g., Green Bonds)

OUR DATA FOUNDATION

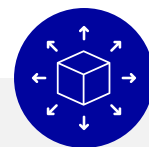

Custom LCA Activity Database

40,000 proprietary gate-to-gate activity models across the apparel and textile value chain, enabling precise accounting for country-specific differences in climate, agricultural practices, and land use.

FDM/FEM Data Integration

Leverage automation to validate, benchmark, and ingest facility-level FDM/FEM data, improving the consistency and auditability of your inventory process.

Flexible Model Structure

Rapidly integrate and quality-check facility-supplied data, fill gaps for country-specific fiber LCA, and develop new models at scale as data needs evolve.

WHY AITRACK

Technology for Scalable LCA

Custom modeling for thousands of products within months, powered by the industry's largest LCA activity database, AI-enhanced data mapping, and high-performance computing.

Integrated Corporate-Product Assessment

Seamless footprinting capabilities for consistent, granular insights across corporate and product levels.

Trusted Industry Expertise

Premium, customized services provided by LCA and sustainability experts, grounded in specific industry and local context.

Global Supply Chain Support

Bureau Veritas' on-the-ground presence in over 140 countries for data collection, verification, and project implementation.

Future-Proof Solutions

Evolving with changing market demands, backed by Bureau Veritas' 200-year track record serving 400,000 clients globally.
